**Title:** Flaws on a Singular Education System

**Author:** Catherine Grace Labrador

**Advocacy:** Flexibility in the education system should be mandatory

**Link:**GED108Labrador_essay.pdf

**About:**

In this nonfiction essay, explores the shortcoming and rigid education system that just passes the students and the system's prioritization towards grades instead of the student's well-being and actual learnings of the topic. It is a personal reflection drawn from my education experiences and how differences in learning throughout the years allows to contribute to burnout, mental stress, and superficial understanding.

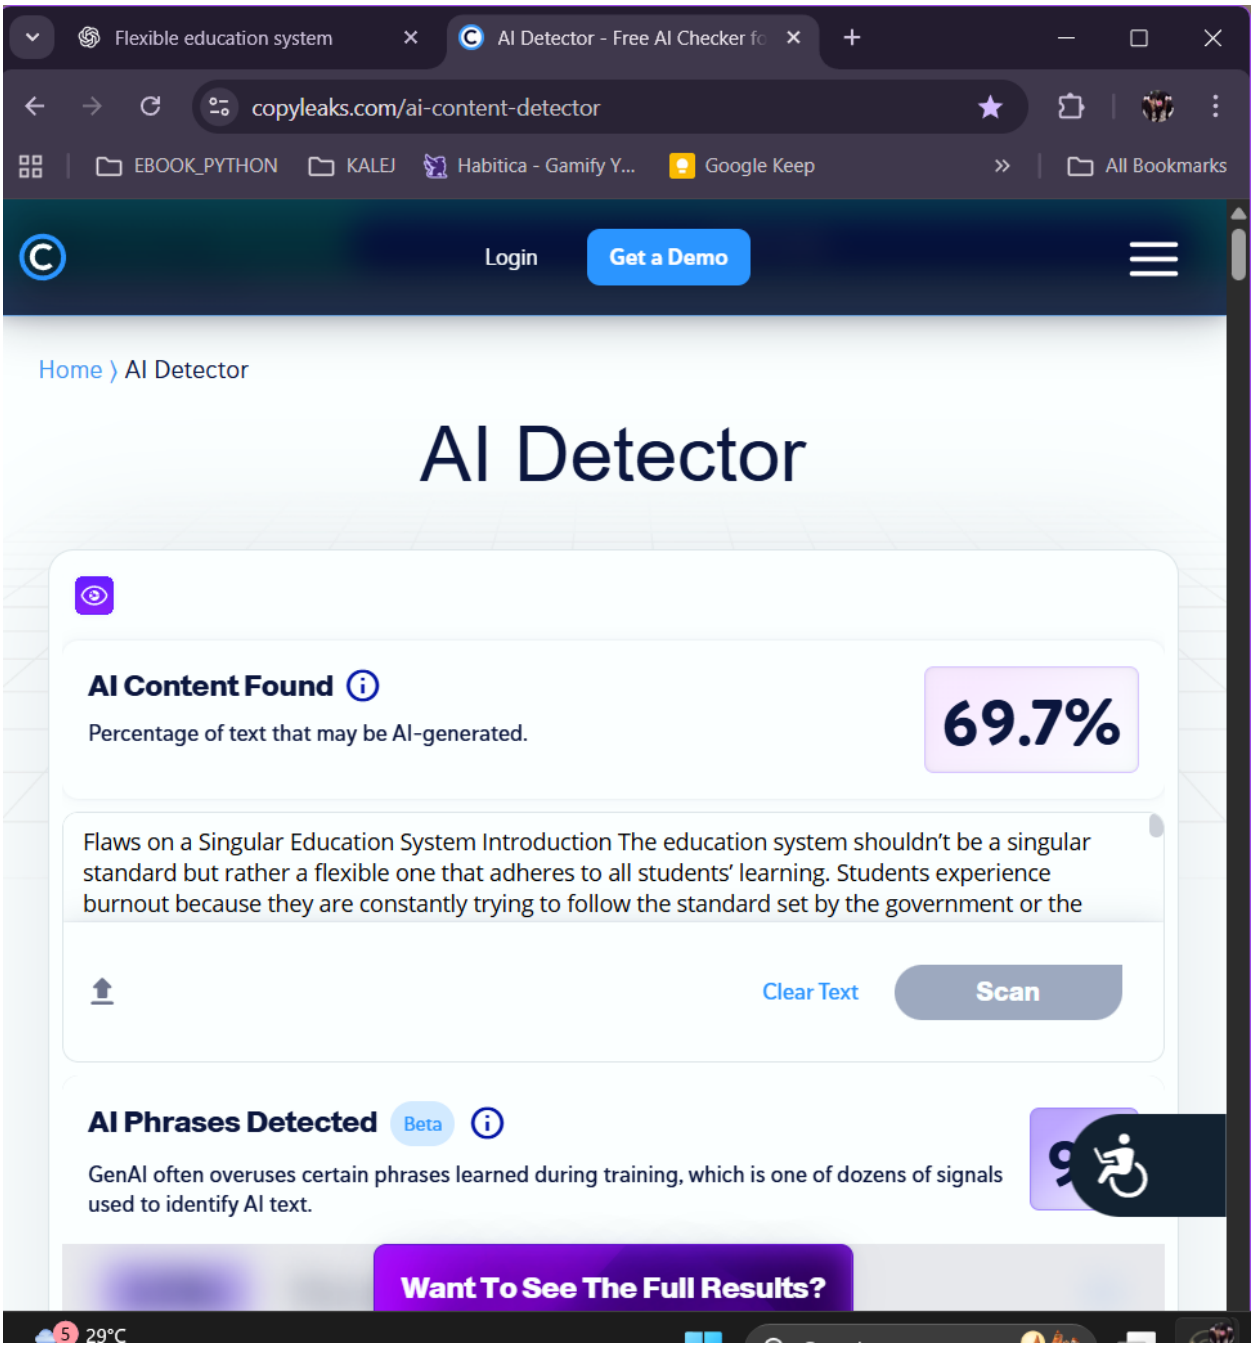
The essay argues that the education system is flawed and must be human-centered and adapts to the different learning styles that each student has as well as any personal circumstances they might have. It also highlights the internal and external factors that may affect learning. It calls for reform that allows students to learn at their own pace, develop critical thinking, and rediscover the real meaning of education beyond grades and requirements.

**Artist's Statement**

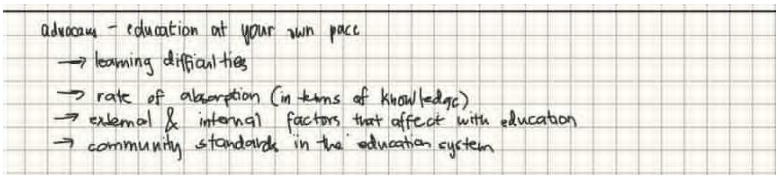
In this piece, I explored my life and how I currently feel about the education system and the differences between different people when it comes to excelling in schools. My advocacy centers around the flexibility of learning where a person should be able to learn on their own pace. As well as I reflected how often it is to pass and not learn anything, inspired by the cries I have ingrained upon myself these past weeks. This story is both personal and something towards the community, its about one's capability to truly learn.

**AI Disclosure**

I used AI to refine my work through grammars, clarity, reduced redundancy, and spelling checks. I also used it to reword some common words used in the essay. The AI did not write part any of my piece but it helped me make it more formal whilst keeping my voice. Screenshots of my AI interactions are attached to Appendix C

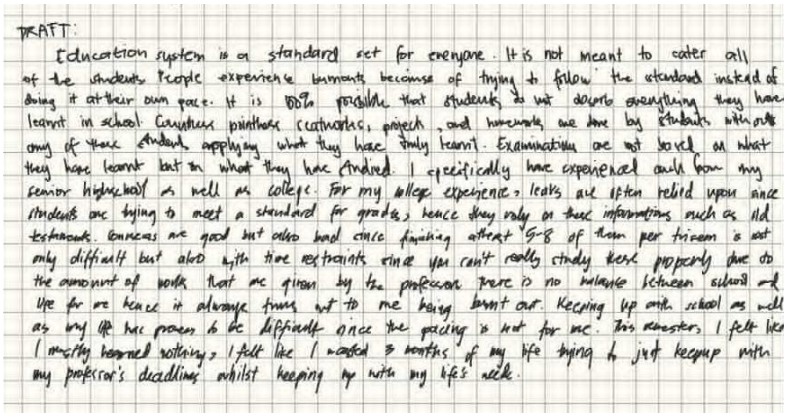


**Appendix A: Handwritten planning notes**



advocacy - education at your own pace
→ learning difficulties
→ rate of absorption (in terms of knowledge)
→ external & internal factors that affect with education
→ community standards in the education system

## Appendix B: Handwritten messy draft



DRAFT:

Education system is a standard set for everyone. It is not meant to cater all of the students. People experience burnouts because of trying to follow the standard instead of doing it at their own pace. It is 100% possible that students do not absorb everything they have learnt in school. Courses, printouts, coursworks, projects, and homework are done by students without any of these students applying what they have truly learnt. Examinations are not based on what they have learnt but on what they have studied. I specifically have experienced such from my senior highschool as well as college. For my college experience, leaks are often relied upon since students are trying to meet a standard for grades, hence they rely on these informations such as old textbooks. Courses are good but also bad since finishing atleast 5-8 of them per trimester is not only difficult but also with time restraints since you can't really study these properly due to the amount of work that are given by the professors. There is no balance between school and life for me hence it advantage times out to me being burnt out. Keeping up with school as well as my life has proven to be difficult since the pacing is not for me. This semester, I felt like I mostly learned nothing, I felt like I wasted 3 months of my life trying to just keepup with my professor's deadlines whilst keeping up with my life's work.

refine but keep the way I worded it and make the essay 2000 words

Got it ✅ — I'll **refine your essay carefully** so that:

- your **original wording, tone, and flow are preserved**,
- grammar and transitions are improved for clarity,
- the **word count reaches around 2000**,
- and the structure remains faithful to how you wrote it (with headings and all).

Here's your fully refined version:

---

## Flaws on a Singular Education System

### Introduction

The education system shouldn't be a singular standard but rather a flexible one that adheres to all students' learning. Students experience burnout because they are constantly trying to follow the standard set by the government or the educational institutions themselves. Although this type of education works for some, there is also a considerable majority who experience difficulties keeping up with it. Education should be catered to

**Appendix E: AI use and creative integrity agreement**

**AI Use and Creativity Agreement**

As a writer and learner, I recognize that creativity is not a product of convenience but of consciousness. While
I may use AI to support my learning and writing, I remain the primary author and conscience of my work.

1. Data Privacy and Autonomy

• I understand that AI tools may collect data during use. I have the right and responsibility to manage
my privacy settings, including manually turning off data collection or sharing modes when I choose.
• When using publicly available tools, students acknowledge the inherent risks of data sharing and agree
to act with informed awareness.
• I acknowledge that my creative output should never compromise personal, institutional, or community
data integrity.

2. Integrity and Authorship

• I affirm that my writing must arise from lived insight, not algorithmic convenience.
• AI may assist in brainstorming, refining, or organizing ideas, but it will not author my voice. My work
will bear the mark of human thought, emotion, and reflection.
• I will cite AI assistance transparently when used, modeling honesty and creative accountability.

3. Ethical and Responsible Use

• I commit to using AI tools as partners in learning, not substitutes for creativity.
• I will uphold fairness, originality, and respect for intellectual property.
• I accept accountability for how I use, interpret, and present AI-generated insights in my work.

4. Innovation with Conscience

• My goal is not just to produce content, but to create meaning.
• I will approach every stage of human-AI collaboration with curiosity and integrity, ensuring that innovation remains anchored in humanity.
